Data Analyst

Experienced Data Analyst with proven expertise in SQL, Power BI, and Python for delivering reliable, high-quality reporting solutions. Skilled in data validation, transformation, and automation across legal, financial, and hospitality domains. Adept at collaborating with stakeholders to translate business needs into actionable insights and maintaining data quality in complex environments. Proficient in cloud platforms and BI tools, ensuring scalable, maintainable analytics that drive informed decision-making.

SKILLS

Data Visualization & BI Tools: Power BI, Tableau, Sigma Computing, Amazon QuickSight, Google Data Studio, Looker Studio, Excel, PivotTables, Power Query, DAX.
Databases & Cloud Platforms:SQL, SQL Server, Oracle, Amazon Redshift, Redshift Spectrum, Athena, Azure Synapse Analytics, Azure Data Factory, Azure Databricks, AWS Glue, AWS Lambda, AWS, Microsoft Azure, Google Cloud Platform, BigQuery, GCP Dataflow, S3, Blob Storage, Cloud Functions, Azure Functions.
Data Engineering & ETL:ETL, ELT Pipelines, Data Ingestion, Data Transformation, Data Warehousing, Data Integration, Talend, APIs, SQL Stored Procedures, Automated Data Refreshes, Reporting Automation, Workflow Automation.
Analytics & Programming: Python, Pandas, NumPy, Matplotlib, scikit-learn, PySpark, R, Statistical Analysis, Regression Analysis, Forecasting, Customer Segmentation, Churn Analysis, Anomaly Detection, Data Profiling, Data Quality, Data Validation, Data Reconciliation, Git, Jenkins, CI/CD, PyTest, Jira, Confluence.

PROFESSIONAL EXPERIENCE

Personal Injury Data Analyst, Postman Law — Feb 2026 - Sept 2026 | Remote

- Developed SQL queries for over 15 key case management reports in Sigma Computing, ensuring data validation accuracy and improving stakeholder communication.
- Built 22 Power BI dashboards incorporating data quality checks, data governance principles, and automated refreshes to enhance leadership visibility into case progress and task completion.
- Executed Python scripts using Pandas to profile datasets and identify over 3,000 duplicate and null records, streamlining data quality for reporting automation.

Financial Data Analyst, Synchrony Financial — Jul 2024 - Jan 2026 | Remote

- Designed and maintained over 10 Power BI dashboards using SQL and data modeling to deliver clear portfolio performance insights for cross-functional stakeholders.
- Enhanced ETL pipelines by applying Power Query and DAX for data transformation, improving data refresh efficiency by 20% through collaborative process refinement.
- Automated data quality checks and reporting workflows using Python and NumPy, reducing manual validation time by 35% while communicating findings to business teams.
- Streamlined Excel-based reconciliations with PivotTables and advanced formulas to improve data validation accuracy and support data quality monitoring initiatives.
- Coordinated sprint planning and issue tracking using Jira and Git, leading a team effort that resolved 15+ critical defects and enhanced reporting stability.
- Delivered detailed Power BI reports with technical documentation and metadata management, enabling maintainability and user adoption that decreased support queries by 30%.

Senior Data Analyst, Citicorp Credit Services — Jul 2021 - Jul 2023 | Remote

- Implemented data warehousing improvements in SQL Server and Azure Synapse Analytics, enhancing query performance by 35% and increasing system reliability in a high-volume transactional platform.
- Constructed Power BI data models using DAX to deliver interactive dashboards and exploratory analysis, enabling stakeholders to track KPIs with 25% faster insight generation.
- Created Tableau dashboards with calculated fields and KPI development that streamlined operational reporting and improved communication of portfolio performance trends.
- Supported collaboration with data engineering teams by managing Azure Data Factory ETL pipelines and Azure Databricks workflows, accelerating data refresh cycles by 40%.
- Analyzed transactional data using Python and scikit-learn regression analysis to forecast payment behavior, contributing to improved portfolio risk assessments.
- Managed version control and deployment using Git, Jenkins, and CI/CD pipelines, reducing production release errors by 30% through thorough technical documentation and automated workflows.

Data Analyst, Marriott International Jul 2020 - Jun 2021 | TS, IN

- Extracted and combined hotel operational data using SQL and Power Query to build Power BI dashboards, enabling advanced data modeling and visualization for occupancy insights across 50+ properties.
- Optimized Excel reporting processes by automating PivotTables and implementing data reconciliation checks, reducing manual errors by 30% and accelerating month-end close.
- Designed interactive Tableau dashboards featuring filters and drill-down views, enabling clearer communication of revenue and cancellation trends to regional leadership teams.
- Processed ETL data pipelines by collaborating with data engineers to standardize and transform reservation and financial data, improving report accuracy and timeliness.
- Validated data quality through comprehensive data validation and reconciliation steps, identifying and documenting discrepancies that improved stakeholder trust in revenue reporting.

EDUCATION

Master of Science, University of New Haven (CGPA: 3.57) Aug 2023 - May 2025 | CT, US

CERTIFICATIONS

AWS Developer Associate
AWS Certified Cloud Practioner
Azure Fundamentals
BI Analysis
