Data Analyst

Data Analyst with expertise in SQL, Python and BI tools (Power BI, Tableau, Sigma, Looker Studio) for delivering reliable, high-quality reporting. Experienced in data validation, transformation and automation in legal case analytics, with end-to-end projects spanning legal operations, healthcare, banking, vehicle safety and public-sector data. Adept at translating business needs into actionable insights and maintaining data quality, with hands-on cloud experience across Azure, AWS and Google Cloud.

SKILLS

Data Visualization & BI Tools: Power BI, Tableau, Sigma Computing, Amazon QuickSight, Google Data Studio, Looker Studio, Excel, PivotTables, Power Query, DAX.

Databases & Cloud Platforms: SQL, SQL Server, PostgreSQL, Oracle, Amazon Redshift, Redshift Spectrum, Athena, Azure Synapse Analytics, Azure Data Factory, Azure Databricks, AWS Glue, AWS Lambda, AWS, Microsoft Azure, Google Cloud Platform, BigQuery, GCP Dataflow, S3, Blob Storage, Cloud Functions, Azure Functions.

Data Engineering & ETL: ETL, ELT Pipelines, dbt, Data Ingestion, Data Transformation, Data Warehousing, Data Integration, Talend, APIs, SQL Stored Procedures, Automated Data Refreshes, Reporting Automation, Workflow Automation.

Analytics & Programming: Python, Pandas, NumPy, Matplotlib, scikit-learn, statsmodels, PySpark, R, Statistical Analysis, Regression Analysis, Forecasting, Customer Segmentation, Churn Analysis, Anomaly Detection, NLP, Data Profiling, Data Quality, Data Validation, Data Reconciliation, Git, Jenkins, CI/CD, PyTest, Jira, Confluence.

PROFESSIONAL EXPERIENCE

Personal Injury Data Analyst, Postman Law

Feb 2026 – Sep 2026 | Remote

- Developed SQL queries for over 15 key case management reports in Sigma Computing, ensuring data validation accuracy and improving stakeholder communication.
- Built 22 dashboards in Sigma Computing and Salesforce (Litify) incorporating data quality checks, data governance principles, and automated refreshes to enhance leadership visibility into case progress and task completion.
- Executed Python scripts using Pandas to profile datasets and identify over 3,000 duplicate and null records, streamlining data quality for reporting automation.

PROJECTS

PI Case Intake Forecasting & Growth Analytics | *Python, SQL, BigQuery, Looker Studio, statsmodels*

[Live](#) | [GitHub](#)

- Forecasted case intake for a simulated 12-office personal injury firm using public FARS crash, weather and population data, linking market demand to staffing capacity, marketing economics and office performance.
- Tested a winter-peak assumption for Michigan and Ohio auto cases and found the stronger peak in summer; built validation checks and documented data limitations into the pipeline.

AI Occupational Displacement Tracker | *Python, pandas, statsmodels, SciPy, Plotly, Streamlit*

[Live](#) | [GitHub](#)

- Combined BLS employment data for 861 occupations (2020–2025) and 210K+ state-level rows with two independent AI-exposure research measures.
- Ran a stepwise regression showing the apparent AI-exposure effect becomes insignificant once sector is controlled for; added 3-year forecasts and a sentence-embedding career-pivot matcher.

AutoPulse: Vehicle Safety Intelligence | *Python, FastAPI, PostgreSQL, RapidFuzz, Anthropic API*

[Live](#) | [GitHub](#)

- Built a VIN-to-safety-report platform combining four NHTSA data sources (VIN decoding, complaints, recalls, crash ratings) with explainable entity resolution.
- Designed evidence-aware risk logic and an AI analyst that withholds scores when evidence is missing instead of treating unavailable data as zero.

CrisisOps: U.S. Disaster Monitoring | *Google Cloud Run, NWS API, FEMA, CDC SVI*

[Live](#)

- Ranked U.S. counties affected by active National Weather Service alerts into five priority tiers using weighted hazard, population exposure, disaster history and social vulnerability scores; deployed on Google Cloud Run with data-source health monitoring.

Healthcare Analytics Command Center | *Azure Data Factory, Databricks, PySpark, Delta Lake, Tableau*

[GitHub](#)

- Built a Bronze/Silver/Gold lakehouse on synthetic Synthea data with Azure Data Factory ingestion and Databricks data-quality validation.
- Delivered a six-page Tableau command center tracking 4,435 encounters, \$14.6M in claim costs and a 15.69% 30-day readmission rate.

Consumer Complaint Risk & Response Intelligence | *Python, PostgreSQL, dbt, scikit-learn, Power BI*

[GitHub](#)

- Loaded 50,000 CFPB consumer complaints into PostgreSQL and modeled them in dbt into 7 analytics marts covered by 7 reconciliation tests.
- Applied TF-IDF/NMF topic modeling and VADER sentiment, delivering a four-page Power BI risk report with a composite company risk score.

Credit Card Fraud Analytics | *SQL, Python, scikit-learn, Tableau*

[GitHub](#)

- Built SQL data-quality checks and trained Logistic Regression and Random Forest fraud models evaluated on ROC-AUC, precision and recall.
- Packaged a scoring script for new transactions and a Tableau dashboard of fraud patterns.

EDUCATION & CERTIFICATIONS

Master of Science, Computer Science, University of New Haven (CGPA: 3.57)

Aug 2023 – May 2025 | CT, US

Certifications: AWS Certified Developer – Associate | AWS Certified Cloud Practitioner | Microsoft Azure Fundamentals | BI Analysis
